Mobile services for students / parents

Retrieving test results

After exams an educational institution could have an SMS result service. The students send their student number and exam code to receive the grade. Personal passwords can be issued to ensure confidentiality.

Finding the physical location for an examination

A service where the students send an SMS containing a keyword and an examination code, to the school. The response is the name and description of the examination (to avoid any misunderstandings) and the exact time and location for it.

Sending admittance approval / rejection to appliers

This service could be used both for the actual admittance to a university / college and for admittance to specific subjects where there is a limited number of seats available. The student gets the information maybe days before the ordinary mail and the educational institution cuts their cost by avoiding the more expensive "snail" mail.

Student polls

Collecting opinions from selected students during the term. The students may get paid for answering by receiving money or value coupons in their "mobile wallet".

Information about school arrangements

Students may subscribe to information about social arrangements such as parties, special interests happenings, etc.

E-Learning: Questions/ answers

<sette inn eksempler>

Public school: Notify parents if their children shirk school

When pupils shirk school repeatedly, the school administration may offer the parents an SMS message notification if their son or daughter is absent without a known (valid) cause.

Standard services

Standard services cover issues like: Reminder with ones network password, number of compulsory lessons on a subject, deadlines for written lessons, name of a subjects lecturer, etc.
